Sample Document Title

Introduction

This is a sample document for testing pdf2md conversion. It contains various elements including headings, body text, and list items that should be properly detected and converted to markdown format.

Key Features

1. Automatic heading detection based on font size

2. List item recognition with various bullet styles

3. Header and footer removal for multi-page documents

4. Clean paragraph merging and spacing

Details Section

This section provides additional details. The converter should handle multiple paragraphs correctly, maintaining proper spacing between them.

Each paragraph should be separated by a blank line in the markdown output. Font sizes are used to determine heading hierarchy.

Second Page Content

This is the second page of the document. It tests multi-page handling and the ability to properly process content across page boundaries.

Bullet List Example

- First bullet point item
- Second bullet point item
- Third bullet point item with more text

This concludes the sample document. The converter should produce clean, well-formatted markdown from this PDF content.
